

COMPARATIVE QOE SCORING · ONE YARDSTICK

One score to compare every operator fairly

MedUX Scorecard condenses hundreds of thousands of measurements into a single, weighted MedUX Score — so operators, regulators and markets can be compared on the same profile, the same metrics and the same window.

- Weighted MedUX Score
- Like-for-like profiles
- Score evolution
- Award-grade evidence
- Export & share

01 WHY MEDUX SCORECARD

One number teams can act on

Nine weighted metric families collapse into a single MedUX Score, giving executives a headline figure without hiding the breakdown behind it.

Comparisons that hold up

Operators are scored on the same commercial profile, the same metric set and the same measurement window, so differences reflect quality rather than method.

Defensible in public

Because the score rests on published methodology and measured samples, it stands up in regulatory submissions and public marketing claims.

Built on the MedUX data foundation

Scored from probe, crowdsourced and agent measurement across fixed and mobile.

Behind the MedUX Awards

The same scoring model that recognises best-in-class operators per market.

Tracks movement, not snapshots

Weekly score evolution shows whether investment is translating into experience.

NINE METRIC FAMILIES, ONE WEIGHTED SCORE

How the MedUX Score is built

Each metric family is measured against its own target, normalised, weighted by its contribution to perceived experience and combined into the MedUX Score — with the full breakdown always visible beside the headline number.

02 THE NINE METRIC FAMILIES

Per profile

- SpeedTest Download
- UL Compliance
- HTTP DL
- HTTP UL
- Latency
- Gaming
- Web Browsing
- Streaming
- Cloud Storage

Normalised against targets

COMPARABLE

- Each family is scored against its own target, not against raw units
- Compliance metrics measure delivery versus the contracted plan
- Results stay comparable across profiles and technologies

Weighted by experience impact

TRANSPARENT

- Weights reflect how much each family shapes perceived quality
- The headline score never hides its per-metric breakdown
- Sample volume per window is published with the result

03 SCORE EVOLUTION

04 WORKING WITH THE SCORECARD

Four views

Overview, Scorecard, Trends and Geo let teams move from the headline number to the metric breakdown, its movement over time and its geographic distribution.

Filter to a fair comparison

Profile, region and window are explicit filters, so every comparison states the basis on which it was made.

Export what you need

Scores, breakdowns and trends export for board packs, regulatory submissions and marketing review in the formats teams already use.

One score. Nine metrics. Zero ambiguity.

Weighted, normalised and published with the samples behind it.

● WHERE A COMPARABLE SCORE CHANGES DECISIONS

From market position to public evidence

A single comparable score serves very different readers — executives tracking market position, regulators supervising quality, wholesale buyers verifying commitments and marketing teams making claims they can defend.

05 COMPETITIVE & COMMERCIAL USE CASES

Market Benchmarking

Track where you stand against every competitor on the same profile and window, and see which metric families are costing you the lead.

- Market position
- Metric gaps
- Per profile

Investment Validation

Weekly score evolution shows whether network investment is translating into measured subscriber experience, before and after each rollout.

- Before / after
- Weekly trend

Awards & Marketing Claims

Support best-in-class positioning with an independently produced score — the same model behind the MedUX Awards for each market.

- MedUX Awards
- Certifications

Multi-Market Reporting

Compare operating companies across countries on a consistent scale, so group-level reporting does not depend on locally defined KPIs.

- Group reporting
- Consistent scale

06 REGULATORY & WHOLESALE USE CASES

Regulatory Supervision

Give authorities a comparable, methodology-backed quality score per operator and market for transparency programmes and published reports.

- Transparency
- Published methodology

Wholesale & SLA Verification

Wholesale buyers and MVNOs verify the quality actually delivered on a host network against what was committed, scored on the same basis.

- SLA verification
- MVNO

Compare fairly. Report confidently. Win on evidence.

A comparable QoE score for executives, regulators, wholesale buyers and marketing alike.
